

# Interactive UX Research Dashboard

## Project Report

Author: [Your Name]

Institution/Customer: [Client Organization]

Year: 2024

## Executive Summary

This project developed a comprehensive UX research dashboard designed to streamline user data analysis and insights visualization for research teams. The solution addressed critical pain points in data consolidation, visualization consistency, and team collaboration.

## Problem Statement

Research teams struggled to synthesize and visualize complex user data from multiple sources, leading to delayed insights and decision-making bottlenecks. Traditional workflows required 8-12 hours per research cycle for manual data aggregation.

## Key Outcomes

- 75% reduction in data consolidation time (2-3 hours vs 8-12 hours)
- 92% user satisfaction rating (n=45 regular users)
- 100% WCAG 2.1 AA compliance across all components
- 40% increase in cross-team collaboration
